# ALWAYS WANTED A STRAIGHTER SMILE?

**It's never too late to get the straight smile you've always wanted.**

At Gentle Dental & Implant Clinic we offer various different treatments including Quick Straight Teeth, Inman Aligners and Invisalign, to help you straighten your teeth without the unsightly metal braces you may be thinking of!

We use state-of-the-art 3D imaging making the orthodontic process faster. We can plan out the entire procedure in advance which then reduces the time you spend at our practice. Giving you the best straight smile results.

The Six Month Smiles Cosmetic Braces System is an effective, safe and affordable teeth straightening system that suits most everyone's lifestyle. They are non-invasive, built with modern materials and align your teeth within an average time of only six months, rather than years like traditional metal braces.

Best of all, unlike unsightly metal braces Six Month Smiles are much less painful and practically invisible!

The Invisalign System allows us to digitally map and preview your new smile. This allows us to create a more precise, personalised treatment designed specifically for you- including the exact movements of your teeth and how long your treatment will take.

Depending on how much movement is needed and your particular requirements, you may be suitable to change your aligners every week. This means you could achieve your winning smile in as little as 3 months- that's up to 50% faster than standard treatment.

**Quick Straight Teeth**

Quick Straight Teeth™ uses nearly invisible braces to gently straighten your teeth, and give you that smile you've always wanted but maybe thought you'd never have. The 'braces' used are incredibly discreet and are made with top quality tooth coloured brackets and wires so they are virtually invisible- in fact, most people won't even know you are wearing braces at all!

Inman Aligners have been around for many years and their effectiveness is second to none. They are primarily used to treat problems with the alignment of your front teeth, whether they are naturally crooked or they have moved gradually over time.

Compared to invisible braces, such as the Invisalign system, the Inman Aligner can be used to move your front teeth quickly and effectively, usually in a matter of weeks, and without the use of fixed metal braces.
